

SEACOAST UTILITY AUTHORITY

LIFT STATION 54 FORCE MAIN AND WATER MAIN REPLACEMENT

PHASE 1

Ibis Way, Westward Way, Prosperity Farms Road, and Anchorage Park

Seacoast Utility Authority
Holtz Consulting Engineers, Inc

WHAT THIS MEANS FOR YOU

- **Traffic impacts:** We will work to minimize disruptions, but temporary lane closures and traffic shifts may occur during construction.
- **Construction Noise:** Construction activities may generate daytime noise. Work hours will be limited to approved hours, and quiet work periods will be observed at the beginning and end of each day. Any work required outside these hours will be coordinated with the Village, and affected residents will be notified in advance, as applicable.
- **Service Interruptions:** Temporary interruptions may occasionally be necessary. Residents will receive advance notice whenever planned interruptions are required.
- **Anchorage Park Impacts:** A portion of the asphalt walking path within Anchorage Park may be temporarily closed early in the project while the new force main is installed. Access to the park, boat ramp, and other recreational areas will remain open.

WHAT UTILITIES ARE THE AUTHORITY CONSTRUCTING

Seacoast Utility Authority is replacing the existing 6" and 8" water mains along Ibis Way and Westward Way, as well as the existing 24" wastewater force main extending from Prosperity Farms Road, along Ibis Way, and beneath the North Palm Beach Waterway to Anchorage Park. These existing utilities are approaching the end of their useful life.

PROJECT BREAKDOWN

- ✓ Replace existing 6" and 8" water mains along Ibis Way and Westward Way to modernize aging infrastructure and improve the reliability of the community's drinking water distribution system.
- ✓ Replace existing wastewater force main with a 24" wastewater force main along Ibis Way and beneath the North Palm Beach Waterway to enhance the reliability of the wastewater transmission system.
- ✓ Construction activities will primarily occur within existing public rights-of-way and designated utility easements. Disturbed areas will be restored following construction.

BENEFITS OF THE PROJECT

- ✓ Replacing aging water mains helps reduce the likelihood of water main breaks, service interruptions, and emergency repairs, providing more dependable water service for residents.
- ✓ The new force main increases the reliability of the wastewater system, helping it better serve the community.
- ✓ These infrastructure improvements extend the lifespan of essential utilities, reduce maintenance needs, and help ensure safe, reliable water and wastewater services for years to come.

PROJECT TIMELINE

- Selected Contractor: **D.S. Eakins Construction Corp.**
- Estimated Construction Duration: **8 Months**
- Start Date: **October 12, 2026**
- Projected End Date: **June 2027**
